

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A method comprising:
capturing, by a user device, electronic media,
~~obtaining at least one fix point related to a travel scheme,~~
~~obtaining electronic media data under a control of a user,~~
determining, by the user device, in response to the capturing the electronic media, a
geographic location a position of said of a user of the user device,
associating, by the user device, the geographic location position of the user with a fix
point of the at least one fix point on a map, based on the determined geographic location, and
associating, by the user device, the captured said obtained electronic media [[data]] with
the [[said]] fix point on the map, based on the determined geographic location.
2. (Canceled)
3. (Canceled)
4. (Currently amended) Method according to claim 1, further comprising:
storing the associated electronic media [[data]], and
transmitting the associated electronic media.

5. (Currently amended) Method according to claim 4 ~~[[1]]~~, further comprising:
~~providing~~receiving a link₁ from the fix point to the associated electronic media ~~[[data]]~~
based on the transmitted associated electronic media.
6. (Canceled)
7. (Canceled)
8. (Currently amended) Portable electronic device ~~arranged~~ to at least partly organize data in relation to fix points of geographic locations, comprising:
a user input unit ~~arranged~~ to receive user input data,
a positioning unit ~~arranged~~ to determine a geographic location position of a user,
at least one data receiving unit ~~arranged~~ to receive ~~obtain at least~~ a link to electronic media ~~[[data]]~~, in dependence of user control via the user input unit,
where the electronic media is captured by the at least one data receiving unit prior to receiving the link, and
a control unit
~~arranged to obtain~~ receive a fix point, associated with ~~[[of]]~~ a geographic location, where the fix point is selected by the user prior to receiving the at least one link, to receive the geographic location position of the user from the positioning unit, to associate the geographic

~~location position~~ of the user with the fix point, ~~[[and]]~~ to associate the electronic media ~~[[data]]~~ with ~~the~~ ~~[[said]]~~ fix point, ~~and to~~

~~receive the so that a link,~~ from the fix point to the associated electronic media ~~data can be~~
~~provided to the user,~~ the link allowing the electronic media to be retrieved upon selection of the
fix point.

9. (Currently amended) Portable electronic device according to claim 8, in which the control unit further is ~~arranged~~ to:

associate data captured, by the at least one data receiving unit, ~~obtained at the geographic~~
~~location position~~ of the user with the fix point ~~associated with the position of the user.~~

10. (Currently amended) Portable electronic device according to claim 8, further comprising:
an information presentation unit, ~~arranged~~ to present information by the control unit,
under the control of the user.

11. (Currently amended) Portable electronic device according to claim 8, further comprising:
a memory unit, ~~arranged~~ to store data received from the at least one data receiving unit
under the control of the control unit.

12. (Currently amended) Portable electronic device according to claim 8, in which the portable electronic device is a mobile phone.

13. (Currently amended) A system comprising:

an electronic communication device ~~arranged~~ to:

~~receive~~ ~~obtain~~ at least one fix point selected by a user,

provide a travel scheme to include one or more ~~[[for]]~~ fix points, where
the travel scheme comprises a map, and

place the received ~~[[said]]~~ at least one fix point on the ~~[[said]]~~ travel
scheme, and

a portable electronic device ~~arranged~~ to:

capture, by a user, ~~obtain~~ electronic media ~~data under control of a user~~,

determine ~~position~~ a geographic location of the ~~[[said]]~~ user, ~~and~~

associate the captured ~~said~~ ~~obtained~~ electronic media ~~[[data]]~~ with a fix
~~fixed~~ point of the ~~[[said]]~~ at least one fix point selected by the user, and

receive so that a link, from the ~~[[said]]~~ fix point to the associated
electronic media ~~data can be provided to the user~~, in relation to the ~~[[said]]~~ travel scheme, the
link allowing the electronic media to be retrieved upon selection of the fix point.

14. (Currently amended) The system according to claim 13, ~~where~~ ~~wherein~~ the electronic
communication device is further ~~arranged~~ to:

provide access to the electronic media, captured ~~data obtained~~ by the portable electronic
device, by providing the ~~[[a]]~~ link from the fix point to the captured ~~associated~~ electronic media
~~[[data]]~~.

15. (Currently amended) A computer program product comprising a computer readable
medium, having thereon computer program code, to make ~~a computer or~~ an electronic device

perform, when said program code is loaded in the computer or the electronic device, a method comprising:

receiving selection of ~~obtaining~~ at least one fix point associated with a ~~related to a travel~~ scheme map, where the selection of the at least one fix point is performed by a user,

receiving, from a user device, ~~obtaining at least a link to~~ electronic media, captured by the user device at a geographic location, ~~under control of a user,~~

receiving the geographic location of the user device, where a fix point of the at least one fix point corresponding to the geographic location ~~a position of said user,~~ and

associating said electronic media with said at least one fix point based on the position,

providing so that a link from the fix point of the ~~[[said]]~~ at least one fix point to the received associated electronic media can be provided to the user, the link allowing the electronic media to be retrieved upon selection of the fix point.

16. (Currently amended) A computer program element comprising computer program code to make ~~a computer or~~ an electronic device perform a method comprising:

receiving ~~obtaining~~ a map and at least one ~~[[a]]~~ fix point associated with the map ~~related to a travel scheme,~~

capturing ~~obtaining~~ electronic media, at a geographic location ~~under a control of a user,~~
identifying a fix point of the at least one fix point based on the geographic location
receiving a position of said user, and

associating the ~~said obtained~~ captured electronic media with the identified ~~[[said]]~~ fix point based on the ~~position~~ geographic location,

transmitting the electronic media and the identified fix point to a server, and

receiving, from the server, so that a link, from the identified [[said]] fix point to the associated electronic media, in response to the transmitting can be provided to the user, the link allowing the electronic media to be retrieved upon selection of the identified fix point.

17. (Canceled)

18. (Canceled)

19. (Canceled)

20. (New) Method for organizing data in relation to fix points of geographic locations, comprising:

receiving information identifying a fix point on a map, the fix point corresponding to a geographic location;

receiving, from a user device, electronic media, the electronic media being captured by the user device while the user device is at the geographic location; and

providing a link from the identified fix point to the received electronic media, in response to the receiving the electronic media from the user device,

the link allowing the electronic media to be retrieved upon selection of the identified fix point.

21. (New) Method for organizing data according to claim 20, further comprising:
- receiving second electronic media, captured by the user device at a second geographic location, and information identifying a new fix point, different from the identified fix point, the new fix point corresponding to the second geographic location.
22. (New) The method of claim 20, further comprising:
- activating the link, where the activating the link comprises:
- receiving, from the user device, prior to the receiving the electronic media, information identifying a plurality of fix points on the map; and
- providing, to the user device, the map including the plurality of fix points.
23. (New) The computer program product of claim 16, the method further comprising:
- capturing second electronic media at a second geographic location,
- determining that the second geographic location is longer than a predefined distance from the at least one fix point,
- receiving, based on the determining, selection of a new fix point for the map,
- associating the second electronic media with the new fix point,
- transmitting the second electronic media and information identifying the new fix point to the server, and
- receiving a second link, from the new fix point to the second electronic media, the link allowing the second electronic media to be retrieved upon selection of the new fix point.

24. (New) The computer program element of 16, where the identifying the fix point of the at least one fix point based on the geographic location comprises:

identifying a fix point that is physically closest to the geographic location.
